

### Phonetic Codebreaking Two – Colours

In this puzzle, you have been given a list of twenty colours. The names of the colours have been written out in phonetic letters, but in a code in which each phonetic letter of the colours' true phonetic spellings has been replaced with another phonetic letter. For instance, the three phonetic letters in first code word, "ŋaʊtʃ", stand for three other phonetic letters which form the real phonetic spelling of a colour. The code will be the same for all of the words on the list. Thus the "ŋ" letter in "ŋaʊtʃ" will stand for the same letter that the "ŋ" letter in the sixth word does, and so on. Your task is to solve the code and discover the names of the colours on the list. Write the correct phonetic spellings of the colours in the blanks under the Phonetic Spelling column. Then write the spellings of the colours in English in the third column.

Code Spelling	Phonetic Spelling	English Spelling
ŋaʊtʃ	- - -	-----
θɔ:p	- - -	-----
bɑʊɔ:s	- - - -	-----
ɑ:ɡf	- - -	-----
